

# Technical documentation

## Server to server integration

This chapter provides technical information about the integration with IBAN Management Service using REST API integration model.

**Tip:** This API requires Mutual TLS authentication. You can use the same certificate for all mTLS-secured APIs exposed by Verestro. If you don't have one, follow this instruction:

[Connecting to server-to-server APIs](#)

**Important!** Note that you need to be integrated with [Antaca API](#) if you want to use IBAN Management API. Every IBAN is created as a result of the new balance creation in [Antaca API](#)
