Technical documentation

Server to server integration

This chapter provides technical information about the integration with IBAN Management Service using REST API integration model.

> **Tip:** This API requires Mutual TLS authentication. You can use the same certificate for all mTLS-secured APIs exposed by Verestro. If you don't have one, follow this instruction:
>
> Connecting to server-to-server APIs

> **Important!** Note that you need to be integrated with Antaca API if you want to use IBAN Management API. Every IBAN is created as a result of the new balance creation in Antaca API.
