Test guide

This chapter provides guidelines of functionalities offered by IBAN Management Service.

How to test?

In order to test the functionalities offered by IBAN Management Service, you need to be onboarded, check Onboarding chapter. Authorization on beta environment is aslo performed using x509 certificate authentication.

> **Note:** For tests you should connect url dedicated for beta environment to chosen method.

Url	Method (example)	Result (example)
https://iban-management.secure-verestro.dev	/secure/bank-accounts	https://iban-management.secure-verestro.dev/secure/bank-accounts

Functionalities

You can call all the methods given below and in the Technical documentation, using the appropriate URL, but during tests, outgoing and incoming transfers will not be performed. This means that it is possible to call the method, but the funds will not be transferred to the recipient's account.

> **Important!** Realization of sending and receiving transfers won't be possible during tests.

Technical documentation

@swagger="https://iban-management.upaid.pl/doc/server.yaml"
