

Introduction

The Verestro Loyalty platform offers many functionalities and possibilities to support loyalty services.

Including: rewards catalogue management, rewards redemption, voucher system management, benefits management, customized offers and much more.

Note: Some of these components require an additional connection to the Mastercard Reward System (MRS).

Architecture

Our **Core platform** is responsible for the main functionalities and data flow between services.

We offer various integration models with our platform:

- you can display selected components in your WEB or mobile application, e.g. using Webview interface.

- you can integrate with the services offered by our API.
- we can create a loyalty stand-alone platform with selected functionalities.

Additionally, we offer services integrated with external Partners - such as **Mastercard**, from where we have access to additional APIs.
