

Introduction

Payout to Card lets you and your users send funds directly from balance to a recipient via a simple payment link — no need to know their card details. Just share the link through SMS or messengers like WhatsApp or Telegram.

The recipient opens the link, enters their card number, and instantly receives the transfer.

Once your company completes the KYB process, you'll be able to create balances, manage payouts, and track all transactions in our intuitive Admin Panel.

Tip: Check the DEMO version of the application [here](#).

How to connect with us?

Integration with Payout by link can be divided into two parts. The first stage is [business onboarding](#), where the terms of the contract are defined and all documents are confirmed (including KYB verification).

The second stage is technical integration. At this stage your company instance will be created in our system. Once we complete these steps, you can integrate your application with our API following [Technical documentation](#).

Note: It is required that you have an account in Acquirer's system which will settle your transactions. For more informations please contact our Sale Department. We are suggesting to use [Fenige](#) - our partner acquiring institution.
