Intro slides

Card Tokenization

MDES and VTS integration as token requestor. Issuer wallet or SDK integrated into mobile banking application. Available on all Android phones and all countries (including Huawei). Enables mobile contactless transactions using NFC interface.

• API: MDES and VTS.

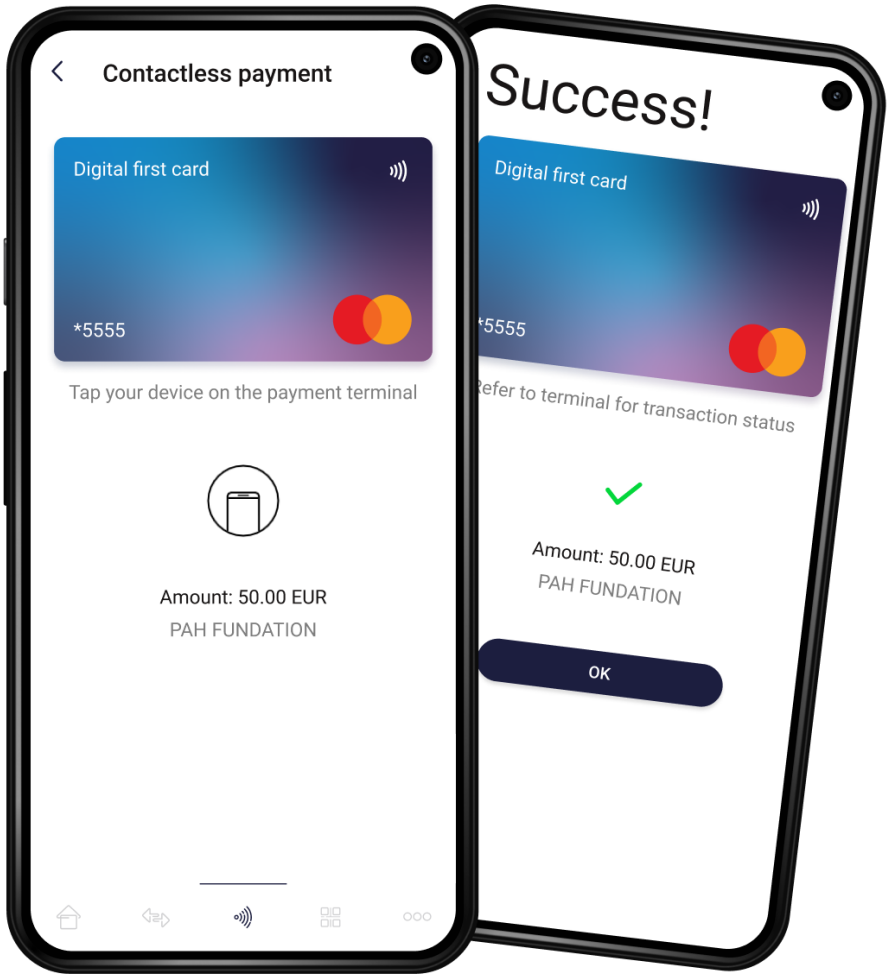
• Readiness: Live.

• SDK available: Yes.

• White label solution available: Yes.

• Certification: Yes, full security and functional certification.

• Implementation time: 3 months from contracting



Implementation Steps

1. **Opening project with Verestro**
   1. Access to MDES
   2. Setup of test environment
   3. Configuration
   4. Receiving access data for server-to-server integration
2. **Access to SDK and API**
   1. Access to artifactory
   2. Access to documentation
   3. Configuration of SDK
3. **Integration and tests**
4. **End-to-end tests on test environment**
5. **Access to production environment**
6. **End-to-end tests on production environment**
   1. Friends and family phase
   2. Go live
